

## **Software Developer**

Our client is a privately held, entrepreneurial company that produces revolutionary point-of-transaction hardware and software solutions that are based on an open architecture. They are currently seeking a developer with proven experience programming in a Linux environment. The candidate should be a logical, disciplined thinker with excellent problem-solving skills.

### Responsibilities:

- Help design, construct, test and maintain software applications
- Participate in development and implementation of application security practices
- Troubleshoot and resolve software problems
- Participate in development and implementation of release processes
- Create software documentation and specifications
- Help secure and maintain payment processor certifications

### Required Experience:

- Bachelors degree in Computer Science or Software Engineering
- 2 years of experience in a software development environment
- C++
- Linux
- Networking protocols including tcp/ip
